ShortsMonkey

YouTube outlier finder and Shorts analyzer for spotting breakout videos from small channels.

About

ShortsMonkey is a YouTube outlier finder built to surface viral videos from small channels before they get widely noticed. It scans low-subscriber uploads in real time across 150+ regions, then ranks Shorts and long-form videos by how strongly they outperform their channel size so creators can study proven formats instead of guessing.

What is ShortsMonkey

ShortsMonkey is a YouTube outlier finder and Shorts analyzer that focuses on breakout performance rather than vanity metrics. It looks for videos with millions of views from

what is taking off right now. The app says it tracks 500K+ channels, has surfaced 5M+ outliers, and is used by 10,000+ creators and teams.

The core idea behind this YouTube outlier finder is simple: a video that massively beats its subscriber base can reveal a format worth copying, testing, or adapting. ShortsMonkey turns that idea into two main charts, one for Shorts and one for long-form video, so you can compare breakout content in the format you care about.

Key features

ShortsMonkey combines live ranking, ratio-based filtering, and niche tracking in one YouTube outlier finder.

- **Shorts Viral Rank**: highlights Shorts that cross a 5M view threshold and orders them by recent momentum.
- **Original Opportunity**: shows long videos from channels under 15K subscribers with a V/S ratio above 10×.
- **55+ niche tracks**: lets you filter by topics such as Science, Space, Health, and Psychology.
- **Daily snapshots**: fresh data lands every day, and the Shorts board uses hourly snapshots for the hottest entries.
- **Exclusion filters**: the long-video view excludes music, trailers, live streams, and reposts.
- **Breakout grading**: videos get S to C style ratings so you can skim for the strongest performers.
- **Regional scan coverage**: the tool scans 150+ regions in real time, which helps surface breakout patterns earlier.

This YouTube outlier finder is designed for discovery, not just reporting. Instead of giving you a generic channel dashboard, it emphasizes videos that are beating the normal subscriber-to-view relationship by a wide margin.

How to use it

Using ShortsMonkey is mostly a search-and-review workflow inside the YouTube outlier

- Switch to the long-form opportunity chart if you care about small-channel formats that are scaling beyond the audience size.
- Filter by niche track so you only see breakouts in your lane.
- Use the V/S ratio to compare how far a video is outperforming its subscriber count.
- Open a report when you want supporting images and a fuller breakdown.
- Check the snapshots and timestamps to see whether a format is still climbing or already cooling off.

For creators, the most useful habit is to look for repeated patterns in titles, hooks, and presentation style across the same YouTube outlier finder results. That is where the app becomes useful for research, not just browsing.

Who it is for

ShortsMonkey is aimed at YouTube creators, growth-focused teams, and researchers who want to understand what actually breaks out on the platform.

- **Solo creators** who need ideas that are already validated by view velocity.
- **Content teams** that want to source topics across multiple niches without manual hunting.
- **Faceless channel builders** looking for repeatable formats with strong momentum.
- **Trend watchers** who want to compare Shorts and long videos in one place.
- **Niche-focused publishers** who only want to review breakouts in a specific category.

If you already know how to make videos but need better topic selection, this YouTube outlier finder is built for that stage of the workflow. If you mainly want publishing, editing, or thumbnail creation tools, this app is not centered on those jobs.

What to know before you use it

ShortsMonkey is useful, but it is not a guarantee that a video idea will work for your own channel. A high V/S ratio in this YouTube outlier finder shows that a video outperformed its subscriber base, but that does not prove the same result will repeat for your audience, language, upload cadence, or production style.

- The tool focuses on breakout discovery, not channel management.
- The long-video board excludes music, trailers, live content, and reposts, so it is intentionally selective.
- The app's rankings are based on live and daily snapshots, so numbers can change as videos keep accumulating views.
- Regional scanning across 150+ regions can reveal trends early, but it does not replace checking your own market data.
- Reports appear to be geared toward analysis and supporting images, not full upload automation or editing.

Use official YouTube analytics when you need channel-specific performance, audience retention, or monetization data. For research, planning, and early trend discovery, this YouTube outlier finder gives you a fast way to narrow the field before you spend time producing a video.

In short, ShortsMonkey is strongest when you want a YouTube outlier finder that exposes proven breakout patterns, then helps you decide what to test next.

FAQ
